

Vessix Vascular Acquired By Boston Scientific For \$425M

Laguna Hills-based [Vessix Vascular](#), a developer of percutaneous radiofrequency (RF) balloon catheter technology being targeted at treating hypertension, has been acquired by **Boston Scientific Corporation**, the two said this morning. The deal is worth an aggregate value of \$425M, and includes \$125M in an upfront payment plus up to \$300M tied to clinical and sales-based milestones. Vessix becomes part of Boston Scientific's Peripheral Interventions business. Vessix Vascular was venture backed by CDF Dinova Venture Partners, Christopher Weil & Company, Edmond de Rothschild Investment Partners, Neomed Management, and Orbimed Advisors. The company had raised somewhere north of \$38M in funding.
